SwipeClock will open the ITLMA conference this year with a showcase on their products and services on Thursday, June 16th.

SwipeClock is an online electronic time and attendance solution for all businesses, large and small. It combines the convenience of online access with the familiarity of a conventional wall-mounted time clock and PC for time data collection. Our service is entirely online, so there's no software to buy, install, or upgrade.

The SwipeClock solution was designed with "everyday people" in mind. It can be setup within seconds, and editing timekeeping data online is simple. Currently based in the Salt Lake City area of beautiful Utah, SwipeClock has been providing timekeeping technology to payroll service providers located primarily in the United States and Canada since 2000. Because our products and services are both Analog and IP-based (Ethernet connectivity), we give employers from around the world the ability to track, and more importantly, reduce labor costs. For more information please visit www.SwipeClock.com.
